

## EDGE® QUICK ATTACH COUPLERS

The solution to increased productivity with added compact excavator versatility and less down time. EDGE Quick Attach Coupler Systems allow your equipment to quickly change multiple attachments for different uses.

Coupler systems feature T-1 steel in all critical wear components. Safety features are incorporated in coupler designs to assure positive hook up. All coupler systems feature hardened bushings in all pivot points.

## OPERATIONAL BASICS

There are two EDGE quick attach coupler systems available, spring loaded quick-coupler and a hydraulic quick-coupler. The spring loaded quick-coupler uses T-1 steel in all critical and high wear components. The coupler is manually released from attachments. The spring loaded quick-coupler includes an additional set of bucket pins.

The hydraulic quick-coupler features a spring in the quick-coupler that ensures the bucket or other attachments stay on, even if the hydraulic pressure drops. Simply hook it up, install the safety lock pin and engage the hydraulic cylinder. The hydraulic quick-coupler includes an additional set of bucket pins.

## FEATURES - SPRING LOADED QUICK-COUPLER

- Change attachments quickly
- Hardened bushings utilized in all pivots
- Fail safe safety pin and adjustable springs
- Works with all buckets made to OEM specification
- Easily replaceable springs and components

## FEATURES - HYDRAULIC QUICK-COUPLER

- Ability to change attachments with ease
- Hardened bushings utilized in all pivots
- Fail safe safety pin
- Works with all buckets made to OEM specification
- Easy access cylinder and adjustable springs
- Hydraulic kit included
